RESEARCH COMMENT · EARNINGS REPORT

ASML: Margins and Capacity Drive Upgrades

14 October 2026 · Syz Research

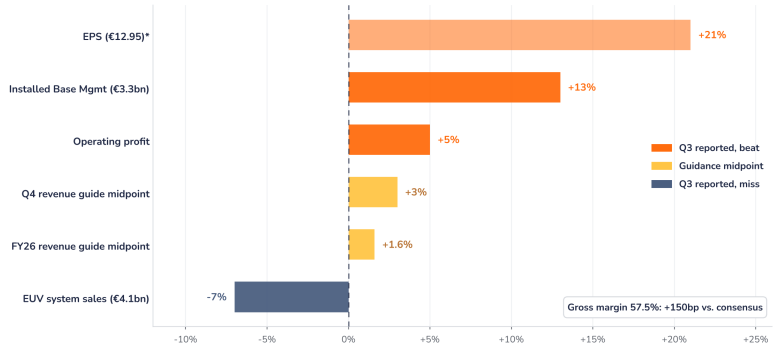

ASML's Q3 2026 results deliver the type of beat we look for: margin and services, not just volume. Revenue of €11.7bn, up 55% YoY, was broadly in line, but the gross margin of 57.5% came in 150bp above consensus and lifted operating profit about 5% above expectations, at a 44.4% operating margin. Q4 revenue guidance of €14.2–15.2bn puts the midpoint about 3% above consensus, and FY2026 guidance rises to €44–45bn. More important than the quarter, management signalled that planned capacity will fall short of demand through 2028. We read this as the start of an upgrade cycle, not a one-quarter beat.

The headline EPS beat needs a discount. EPS of €12.95, up 136% YoY, was about 21% ahead of consensus, but part of that reflects a one-off revaluation of an equity stake. We anchor on the operating line, where the beat is smaller but recurring. The tension for the shares is positioning: sell-side analysts caution that investors may already expect stronger earnings and will look for explicit 2027 guidance.

A quality beat, flattered at the EPS line

Chart 1 · ASML Q3 2026 – Results vs. Consensus

Variance vs. consensus, % · Q3 reported and guidance midpoints · EPS includes a one-off gain · revenue broadly in line (not shown)

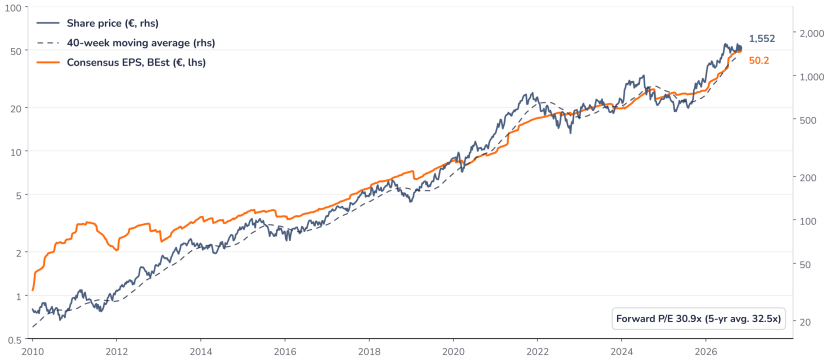

Installed Base Management, at €3.3bn, beat consensus by 13%, with services and productivity upgrades the main operational outperformer. EUV system sales of €4.1bn were the one shortfall, 7% below consensus despite 94% growth; in a capacity-constrained year we read this as shipment timing rather than weaker demand. The guidance beats are modest in revenue terms, but a Q4 gross margin of around 57% implies about 7% EBIT upside, according to sell-side estimates.

Earnings, not the multiple, drive the shares

Chart 2 · ASML – Share Price vs. Consensus Earnings

Weekly, Jan 2010–Oct 2026 · BEst EPS (lhs) vs. price and 40-week average (rhs) · log scales cross at 30x P/E

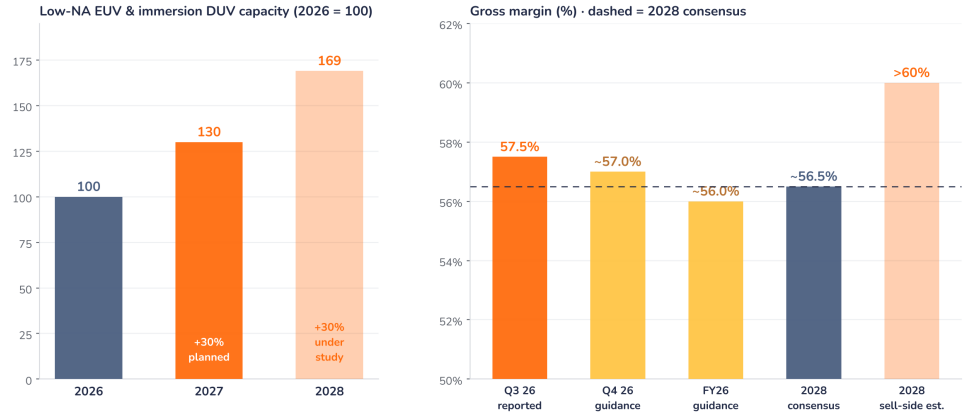

Over the past year the shares have risen 91% while consensus EPS has risen 99%, so the forward P/E has eased from 32.3x to 30.9x, slightly below its five-year average of 32.5x. The rally has been earned rather than rerated. At €1,552, the price sits 12% above its 40-week average and 6% below its June high, leaving room for the upgrades we expect.

Capacity, not demand, is the constraint

Chart 3 · ASML – Capacity and Pricing Drive the Earnings Path

Capacity compounded from ASML's framework · light bars = 2028 step under study and sell-side >60% estimate

Capacity is now the binding variable. ASML's release clarifies that its framework envisaged a 30% increase in Low-NA EUV and immersion DUV capacity in 2027, with a further 30% under investigation for 2028; compounded, that would take capacity to about 1.7 times the 2026 level. Management now says even this will not be sufficient and is exploring additional capacity, particularly for 2028. Order intake for 2028 is already significant, and customers have shown strong interest for 2029 and 2030. We treat that interest as visibility, not backlog: it is not the same as firm orders. But a supplier that is sold out two years forward has pricing power, and the quantified decision on 2028 capacity is, in our view, the most important input for 2028 estimates.

Quote of the earnings

> "Last quarter, we talked about 30% more capacity next year, and also the aspiration to have another 30% increase in 2028. A lot of focus was there, but to be honest, it's becoming very clear that 30% in 2027, 30% in 2028 will not allow us to meet our customer demand."

Pricing opens a path to 60% gross margins

Pricing is the second lever. Sell-side analysts expect concluded price negotiations to contribute partially in 2027 and fully in 2028, with gross margins potentially above 60% in 2028, against consensus of about 56.5%. That is an analyst assessment, not company guidance, but the direction matches what ASML delivered this quarter: 57.5% in Q3 and around 57% guided for Q4, against around 56% for the full year. The sell-side reaction points the same way, with 5–10% consensus EPS upgrades expected for 2027–28 and price targets of €2,350–2,450. The main risk is China, at 23% of system sales versus 14% in Q2, if export restrictions tighten.

Valuation: the growth has to arrive

On sell-side earnings forecasts, the shares trade on about 25x 2027E and 17x 2028E earnings. The compression between the two years is the investment case, and it holds only if capacity is delivered and pricing reaches the P&L on schedule; these multiples should not be read against a separate consensus EPS series. Capacity execution, slower customer capital spending, High-NA adoption delays and elevated expectations are the variables to monitor. The next catalysts are today's investor call, formal FY2027 guidance in January and a quantified decision on additional 2028 capacity.

BASE CASE & IMPLICATIONS

We see ASML entering a multi-year earnings upgrade cycle driven by volume, installed-base growth and pricing, with demand exceeding planned capacity through 2028. We favour exposure to leading-edge lithography and the services annuity its installed base creates. The qualifier is China: at 23% of system sales, it is the main source of downside to estimates should export restrictions tighten.
